HTFx is a utility coin used in the HTFx platform. Purchase does not constitute investment

Short Annotation

This white paper was released by High Technology Solutions Limited on April 18, 2018 and should be read in conjunction with the terms of the Company's ICO (the "Terms").

The purpose of this White Paper is to provide potential customers with information about High Technology Solutions Limited to allow potential buyers to make their own decisions as to whether they want to continue buying.

Coin HTFx. This White Paper does not constitute a proposal or invitation or any other sale or purchase of shares, securities, or any of the Company's assets.

The Board of Directors of High Technology Solutions Limited has ensured that on the date of this White Paper, the information contained herein is accurate as far as possible and there are no other facts, the deletion of which is misleading any statement in this White Paper. Absence of representation, guarantees, warranties or actions are taken regarding its constant accuracy after such date. The information contained in this White Paper can be modified, supplemented and modified at any time and from time to time.

This white paper describes the business objectives of High Technology Solutions Limited and the problem of High Technology Solutions Limited Coins HTFx. It has not been verified, verified, approved or approved by any regulatory or supervisory authority.

The publication of this White Paper and the proposal of the Coins HTFx may be restricted in certain jurisdictions. This is the responsibility of any person holding this White Paper and any person wishing to apply for coins ownership of Coins HTFx (in accordance with the Terms) to inform and comply with any and all laws and regulations that may be applicable to them.

This White Paper does not constitute a proposal or solicitation to anyone in any jurisdiction in which such proposal or petition is not legal or in which the person making such an offer or petition does not have the appropriate qualifications for this.

Prospective HTFx coin buyers should inform themselves about the legal requirements and consequences of buying, storing and disposing of HTFx coins and any applicable currency control rules and taxes in the countries of their respective citizenship, residence and / or domicile.

Prospective buyers of HTFx coins are fully responsible for ensuring that all aspects of this White Paper and the Terms are acceptable to them. When buying HTFx coins, there may be special risks that can lead to the loss of all or a significant portion of the purchase amount. Buying HTFx coins is considered speculative by nature, and it is associated with a high degree of risk. High Technology Solutions Limited does not

represent, warrant, warrant or warrant that HTFx coins are defective / viral or will comply with any specific requirements of the potential buyer. You should only buy HTFx coins, if you can afford a total loss. If you do not fully understand and accept the nature and potential of the risks associated with the purchase, you should not purchase Coin HTFx.

The purchase of Coins HTFx is possible only after the potential buyer has read, understood and assumed all possible risks. Each potential buyer will have to acknowledge that he has made an independent decision to buy Coins HTFx and that he does not rely in any way on High Technology Solutions Limited, his Board of Directors or any other individual or entity (other than his own buyer's consultants).

Prospective buyers are strongly advised to consult their own legal, tax or other advisor before purchasing the Coins HTFx.

High Technology Solutions Limited and its Board of Directors do not provide any recommendation or recommendation for HTFx coins and they do not approve such coins and bear no responsibility or responsibility for any use of this White Paper by any person violating any local regulatory requirements regarding the distribution of this White Paper or any applicable rules regarding the proposal of Coins HTFx.

Statements made in this White Paper are based on laws and practices in force in Belize and subject to changes in these laws.

The publication, dissemination or dissemination of this Technical Document does not mean that applicable laws, regulatory requirements or rules have been complied with.

There are risks and uncertainties associated with HTFx and / or Distributor and their respective businesses and operations, Coin HTFx, Initial Coin HTFx and HTFx wallet (each as specified in this technical document).

This Technical Document, any part of it and any copy thereof, shall not be accepted or transmitted to any country where the dissemination or dissemination of this Technical Documentation is prohibited or restricted.

No part of this Technical Document shall be reproduced, distributed, or distributed without the inclusion of this section and the following sections entitled "Disclaimer", "Without Representations and Guarantees", "Representations and Guarantees from You", "Warning Notice on Forward-Looking Statements" "Information on the market and industry and the lack of consent of others", "Used terms", "Without advice", "No additional information or update", "Restrictions on distribution and distribution", "Ots statement of securities or registration "and" Risks and uncertainties ".

Denial of responsibility

To the maximum extent permitted by applicable law, rules and regulations, HTFx and / or Distributor shall not be liable for any indirect, special, incidental, consequential or other damages of any kind, in tort, contract or otherwise (including, , loss of income, income or profit, and loss of use or data) arising from or in connection with any acceptance or reliance on this Technical Document or any part thereof by you.

Understand that all the information regarding the purchase of Coins HTFx, contained in WhitePaper and on this website. All information provided by the referral source is not allowed by HTFx and can not be relied upon in the exchange of bitcoins on Coin HTFx.

Without representations and guarantees

HTFx and / or Distributor do not, or do not intend to do, and hereby waive any representations, warranties or obligations in any form whatsoever for any person or person, including any representation, guarantee or liability with respect to truth, accuracy and completeness of any information set forth in this document. HTFx and / or Distributor does not guarantee or warrant that the site will be uninterrupted, prompt, error-free, inactive or free of viruses. Therefore, the information is provided "as is" without warranty of any kind, either express or implied, including accuracy, timeliness and completeness.

Representation and guarantees from you

By accessing and / or taking possession of any information in this Technical Document or its part (as the case may be), you represent and warrant to HTFx and / or Distributor the following:

1) you agree and acknowledge that Coin HTFfx is not a security in any form in any jurisdiction;

2) you agree and acknowledge that this technical document is not a prospectus or an offer of any document, is not intended to create a securities offering in any jurisdiction or an application to invest securities, you are not required to enter into any contract or mandatory legal obligation , and no crypto currency or other form of payment should be accepted on the basis of this Technical Document;

3) you agree and acknowledge that no regulatory body has reviewed or endorsed the information contained in this Technical Document, no action has been or will not be taken in accordance with the law, regulatory requirements or rules of any jurisdiction, as well as publication and dissemination or distribution, this technical document does not mean that the applicable laws, regulations or regulations have been complied with;

4) you agree and acknowledge that this technical document, commitment and / or completion of the initial sale of HTFfx Coins or future trade in HTFfx coins on any exchange of crypto-currencies should not be interpreted, interpreted or considered by you as an indication of the merits of HTFfx and / or Distributor, HTF coins , Original Coin HTFfx and Wallet HTFfx coins (each of which is mentioned in this Technical Document);

5) the distribution or distribution of this Technical Document, any part thereof or any copy thereof or its acceptance by you, is not prohibited or restricted by applicable laws, regulations or rules of your jurisdiction and where any restrictions on ownership apply, you have observed and observed all such restrictions at your own expense and without liability with HTFfx and / or the Distributor;

6) you agree and acknowledge that in the case where you want to purchase Coin HTFfx, Coin HTFfx should not be interpreted, interpreted, classified or treated as:

(i) any type of currency other than a crypto currency;

(ii) debentures, shares or shares issued by any person or entity (be it TokenPay and / or Distributor)

(iii) rights, options or derivatives with respect to such debt, equity or share;

(iv) the rights under the contract for difference or for any other contract the purpose or feigned purpose is to secure a profit or avoid loss;

(v) units in the collective investment scheme;

(vi) units in business confidence;

(vii) derived units in business confidence;

(viii) or any other security or class of securities.

7) you have a basic understanding of the operation, functionality, use, storage, transfer mechanisms and other material characteristics of crypto-conversions, block-

based software systems, wallets with crypto-currencies or other related tokens storage mechanisms, blockchain technology and intellectual contract technology;

8) you are fully aware and understand that in the event that you want to purchase any Coin HTFx, there are risks associated with HTFx and Distributor, as well as their business and operations, Coin HTFx, the original Coin HTFx and the HTFx coin purse (each of which mentioned in the Technical Paper);

9) you are fully aware and understand that cryptothermia may have tax consequences in your jurisdiction, including value added tax and capital gains tax; and you agree that neither HTFx nor the Distributor is liable for any consequences related to tax consequences for Coin HTFx, the original Coin HTFx and the coin purse HTFx (each of which is mentioned in the Technical Document);

10) you are fully aware and understand that transactions relating to Coin HTFx, the original Coin HTFx and the coin purse HTFx (each as specified in the Technical Document) may be regulated in your jurisdiction with respect to barter exchanges;

11) you agree and acknowledge that neither HTFx nor Distributor shall be liable for any indirect, special, incidental, consequential or other damages of any kind in respect of tort, contract or otherwise (including but not limited to loss of income, income or profits, and loss of use or data) arising from or in connection with any acceptance or use of this Technical Document or any part thereof by you; and;

12) all the above representations and warranties are true, complete, accurate and do not mislead from the time of your access and / or acceptance of possession of this Technical Document or its part (as the case may be).

Warning note on forward-looking statements

All statements contained in this document, statements made in press releases or in any place, accessible to public and oral statements that may be made by HTFx and / or Distributor or their respective directors, executive officers or employees acting on behalf of HTFx or Distributor (as the case may be), which are not statements of historical fact, constitute "forward-looking statements". Some of these statements can be identified using perspective terms such as "goal", "goal", "anticipate," "believe," "can," "evaluate," "expect," "if," "intend," "Possible "," plan "," possible "," probably "," project "," should "," will "," will "or other similar terms. However, these terms are not an exclusive means of determining forward-looking statements. All statements regarding the financial position of HTFx and / or Distributor, business strategies, plans and prospects and industry perspectives mentioning HTFx and / or Distributor are forward-looking statements. These forward-looking statements, including but not limited to, statements of income and profitability of HTFx and / or Distributor, prospects, future plans, other expected industry trends and other issues discussed in

this HTFx and / or Distributor document are matters not addressed. are historical facts, but only forecasts.

These forward-looking statements involve known and unknown risks, uncertainties, and other factors that could cause the actual future results, results or achievements of HTFx and / or Distributor to be materially different from any future results, performance or expected expectations, expressed or implied such forward-looking statements. These:

1) changes in political, social, economic and stock or crypto-currency market conditions and regulatory environment in countries in which HTFx and / or the Distributor conducts its respective businesses and operations;

2) the risk that HTFx and / or the Distributor may be unable or fulfill or implement their respective business strategies and plans for the future;

3) changes in interest rates and exchange rates of currencies and crypt currencies;

4) changes in the expected growth strategies and the expected internal growth of HTFx and / or the Distributor;

5) changes in the availability and fees paid to HTFx and / or the Distributor in connection with their respective businesses and operations;

6) changes in the availability and salaries of employees who must be HTFx and / or Distributor for the management of their respective enterprises and operations;

7) changes in the preferences of HTFx and / or Distributor customers;

8) changes in competitive conditions in which HTFx and / or Distributor operate, as well as the ability of HTFx and / or Distributor to compete in such conditions;

9) changing the future capital needs of HTFx and / or the Distributor, and the availability of funding and capital to finance such needs;

10) war or acts of international or domestic terrorism;

11) cases of catastrophic events, natural disasters and natural disasters that affect the enterprises and / or operations of HTFx and / or Distributor;

12) other factors not depending on HTFx and / or Distributor; and

13) any risks and uncertainties associated with HTFx and / or Distributor, as well as their business and operations, Coin HTFx, the original Coin HTFx and the HTFx coin purse (each of which is mentioned in the Technical Document).

All forward-looking statements made or owned by HTFx and / or Distributor, or persons acting on behalf of HTFx and / or Distributor, are clearly qualified to the full extent by such factors. Given that the risks and uncertainties that could lead to actual

future results, results or achievements of HTFx and / or Distributor, differ materially from those anticipated, expressed or implied by forward-looking statements in this Technical Paper, do not place undue reliance on these statements. These forward-looking statements are applicable only to the date of this document.

Neither HTFx, nor the Distributor, nor any other person represents, guarantees or guarantees that the actual future results, results or achievements of HTFx and / or Distributor will be discussed in these forward-looking statements. The actual results, results or achievements of HTFx and / or Distributor may differ materially from those anticipated in forward-looking statements.

Nothing contained in this document is, or can not be considered, a promise, representation or obligation regarding future work or policies of the HTFx and / or Distributor.

In addition, HTFx and / or the Distributor waive any responsibility for updating any forward-looking statements or publicly announce any revisions to these forward-looking statements to reflect future events, events or circumstances, even if new information becomes available or other events occur in the future.

Information on the market and industry and the consent of others

This document contains information on the market and industry, as well as forecasts obtained from internal reviews, reports and studies, where necessary, as well as market research, public information and industry publications. Such surveys, reports, studies, market research, public information and publications usually indicate that the information they contain has been obtained from sources that are deemed reliable, but there can be no guarantee as to the accuracy or completeness of such included information.

To retain for HTFx, Distributor, relevant directors, executive officers and employees, no person has consented to the inclusion of his or her name and / or other information attributed or perceived as referring to such person, in this connection it is presumed that the document and the lack of representation, warranties or obligations should be provided with respect to the accuracy or completeness of such information by such person and such persons are not required to provide any updates on the same.

While HTFx and / or the Distributor has taken reasonable steps to ensure that information is accurately and correctly extracted, HTFx and / or the Distributor did not independently analyze information extracted from third-party sources, verified the accuracy or completeness of such information or the establishment of fundamental economic assumptions based on it. Therefore, neither HTFx nor the Distributor, nor the respective directors, executive officers and employees acting on behalf, make any

representations or warranties regarding the accuracy or completeness of such information and are not required to provide any updates based on them.

Terms Used

To facilitate a better understanding of the Coins HTF_x offered for purchase by the Distributor, as well as the enterprises and operations of HTF_x and / or Distributor, certain specifications and abbreviations have been used, and in some cases their descriptions in this document. These descriptions and assigned values should not be considered as determining their values and may not correspond to standard industry values or usage.

Words importing a single number should, if applicable, include the plural and vice versa, and words importing the male gender should, if applicable, include female and neutral gender and vice versa. References to individuals should include corporations.

No ads

No information in this document should be considered as business, legal, financial or tax advice regarding HTF_x, Distributor, Coin HTF_x, the original Coin HTF_x and the HTF_x coin purse (each of which is mentioned in the Technical Document). You must consult your legal, financial, tax or other professional advisor regarding HTF_x and / or Distributor, as well as the relevant businesses and operations, Coin HTF_x, the original Coin HTF_x and the HTF_x coin purse (each of which is mentioned in the Technical Document).

You should be aware that you may need to bear the financial risk of any purchase of Coins HTF_x for an indefinite period of time.

There is no additional information about the update

No person has been or is not authorized to provide any information or presentation not contained in this document in connection with HTF_x and / or Distributor, as well as their respective enterprises and operations, Coin HTF_x, the original Coin HTF_x and HTF_x coin purse (each of which is mentioned in the Technical Document), and, if given, such information or presentation should not rely on the fact that they have been resolved or on behalf of HTF_x and / or Distributor. The original sale of Coin HTF_x (as stated in the Technical Paper) under no circumstances represents a permanent establishment or creates any assumptions or consequences that there was no change or development that could reasonably lead to significant changes in the business, terms and conditions of the HTF_x and / or Distributor or in any statement of fact or information contained in this Technical Document from the date of its provision.

Restrictions on distribution and distribution

The distribution or distribution of this Technical Document or any part thereof may be prohibited or restricted by laws, regulations and rules of any jurisdiction. In the

event that any restrictions apply, you must inform yourself and comply with any restrictions that apply to your ownership of this Technical Document or its part (as appropriate) at your own expense and without obligation to HTFx and / or the Distributor. Persons who have been distributed or distributed a copy of this Technical Document have granted access or otherwise disposed of the Technical Document in their possession, do not distribute it to other persons, reproduce or otherwise distribute this Technical Document or any information contained herein for which -You can not resolve or cause the same goals.

Risk and uncertainty

Prospective buyers of Coins HTFx (as specified in this document) must carefully consider and evaluate all the risks and uncertainties associated with HTFx, the Distributor and their respective businesses and operations, Coin HTFx, the original Coin HTFx and the coin purse HTFx (each as specified in the Technical Document), all the information contained in this White Paper, prior to any purchase of Coins HTFx. If any such risks and uncertainties develop in real events, the business, financial condition, performance and prospects of HTFx and / or Distributor may be significant and unfavorable. In such cases, you may lose all or part of the accumulated, acquired Coins HTFx.

Please note that citizens of the United States, the United Kingdom, Japan, Singapore, China and / or residents of these countries are prohibited from participating in the sale / purchase of Coins HTFx.

Brief insight

Coin HTFx is not the first project of High Technology Solutions Limited for seven years. The company develops, implements and integrates various promising directions for all customers, primarily affecting the interests of investors and responding to their demands and requests.

Coin HTFx - self-financing, self-managing, private, instant and secure Cryptocurrency, based on the Dash crypto currency, took all the best and became even more convenient and sought-after among investors, was developed with a democratically determined transparent social contribution executed without central management to support socially responsible decentralization of currency. Budgets for the social contribution, promotion of users and traders and stimulation of use, budgeting, development and marketing, as well as improved adjustment of mining complexity for better distribution and growth, better management, aimed at increasing decentralization and democratic freedom and various scaling opportunities will be included. and transaction speed.

Coin HTFx - developed on an advanced and successful encryption protocol, we tried to develop a strategy for mass implementation in the draft protocol to support

aggressive penetration into the financial market and the wide recognition of Coin HTFx, providing an alternative to centralized social contributions, bank deposits, other investments. Coin HTFx will be your favorite and universally recognized currency.

Introduction

Thanks to the work of Satoshi Nakamoto and Evan Duffield and the team, the digital currency has reached a level of maturity where it can function as a form of digital money; where the end user can send an instant, private and secure transaction over the network and where the network itself can independently finance and manage its development and growth efforts on a decentralized basis.

In addition to technical problems that need to be overcome in order to compete with credit cards, banks and currencies, such as those necessary for scaling safely and qualitatively, we believe that many of the key elements needed for crypto currencies that function as digital money or a way of payment are at the root and that the success of the crypto currency is becoming increasingly dependent on acceptance factors, such as user interfaces, price stability and network effect.

For this reason, and just as it would be unnecessary or inappropriate to reinvent the wheel or the basics of the engine in order to build our vision of the car, we chose the derived Dash code with open source (in itself from Bitcoin) for its two-tier network with the stimulated MasterNodes and enhanced transaction speed and privacy features as a starting point for our development team, while adding several improvements related to our goal, brand vision and mass adoption strategy.

A tool that can become an ideal global payment system is usually used as a speculative asset. This project is designed as a solution to the main problem in question, and takes into account the problems and problems faced by the global financial system.

Prerequisites for creating a project

The prerequisites for the creation of the project appeared long before the formation and creation of High Technology Solutions Limited when our team was interested in the issue of investments, in 2011 we are creating our broker company, which allows each investor to receive a passive profit. But as the development of other industries, including the rapid development of the crypto currency, led to the creation of its own currency, which will solve the main problem of each investor - maximizing the profit with minimal risks and costs including payments for taxes to the state with disclosure of information and the account holder.

This problem is not the only one, as we all understand that no investment company, a brokerage company in the forex market, binary options and other financial structures can provide 100% anonymity to their customers and protect transactions,

including themselves deposits, accounts and organize the flawless storage of your savings.

Many payment systems, as an example of E-Gold, Moneybookers (changed its name to Scryll), LibertyReserve, and EgoPay, already today is another large electronic payment system called OkPay which is re-bought and on the basis of which a new MoneyPolo and such payment systems are being used that investors from all over the world are using, customers are sometimes simple people, such systems are many and many work for years, but do not give full use of all investment opportunities.

If you count that only in LibertyReserve there were more than a million users who lost more than 170 000 000 dollars in their accounts only at the moment when this payment system was closed (the data may be different and not exact), we take them from open sources and know what hundreds of millions, trillions of dollars each year users lose on commissions for transactions, converting, blocking accounts, hacking wallets and other hacker attacks, paying taxes and other fees in including and converting to the country's currency.

Clients of any brokerage company do not have the opportunity to properly enter and withdraw money, they simply do not have a choice and we have repeatedly evaluated this market, we are told by clients from Alpari, InstaForex, RoboForex, TeleTrade, NordFX, HYCM, Forex Club, FxPro, Grand Capital, Larson & Holz IT Ltd, Boston Merchant Financial, CMC Markets, and a number of other large and well-known companies, totaling 2,500 brokers and the possibility of integrating and implementing payment by crypto currency has been realized in no more than 0.2% of all companies. We are not talking about the issue of trade in crypto currency, we are talking about the possibility of using accounts and as a variant of the account not only in dollars, euros, rubles, but also trading accounts in the crypto currency.

In the course of the study, we realized that customers simply need to have this opportunity, and the problem of integration and working with companies is only an incentive for the development and generation of our currency that we suggest you use directly not only in everyday life to buy goods or pay for services, but also for immediate speculation and profit for everyone who wants on the planet.

When the wishes of clients are scientifically satisfied, this only has a positive effect on the development of the company and the project as a whole, can talk about its profitability and prospects of creation, about development for several decades in advance. But if we take into account the wishes of traders and say that we cover all clients, we must solve the problem of permanent "plums". We do not want to keep silent about the fact that 99.9% of clients simply do not know how to trade and lose their savings on the first day.

For example, let's take an average company that has about 40,000 customers and we can confidently say that each of them lost at least \$ 100 in this company, which is

14/57

ico.htfx.online

©2018, Belize High Technology Solutions Limited HTFx.OnLine or its affiliates

HTFx is a utility coin used in the HTFx platform. Purchase does not constitute investment

4,000,000 dollars left by customers in the company, now take the number of brokers 2500 and multiply for 4 000 000 \$ we get 10 000 000 000 \$ this amount which customers lose every year! Why did we take one year? More than 7.5 billion of the world's population believe us, on our word, they lose much more on investment, much more than we have indicated here and it does not matter for a year or three years, understanding is important. And what is important is that we want to change this situation in favor of clients, in favor of each investor.

In most cases this happens on the issue of ignorance of the market, people simply can not study the market in a short period of time and in the hope of earning a fortune lose everything. We also solved this problem thanks to our Cryptocurrency, Coin HTFx will allow you to make huge profits and be confident in the future safely, without the risk of loss, without knowledge of the market, without additional costs.

Description of the project

Like many who read this White Book, we also believe that solving all problems and problems is possible only if we create a new crypto currency, create a new HTFx Coin and take as a basis Dash we really liked the implementation of this coin and we decided to implement our improvements.

In addition, the coin Dash is now worth more than \$ 300, and even buy one coin to be at the origin of the possibility of the coin has no one else, what to speak of the creation of MasterNode 1000 coins or a budget of \$ 300 000, this version has a Dash simply unattainable for more customers. And since we are talking about the possibility of investing and accessibility for all segments of the population from \$ 10 or \$ 100 at the initial stage of the ICO is available for all.

The creation of each coin is a separate condition and the solution of their tasks, each coin has its own unique purpose and therefore can be viewed by investors as an addition to the main investment portfolio or the main type of investment, since even distributing its budget between several coins and making an investment at the ICO stage in coin from \$ 10 to \$ 100 that can afford almost everyone can get 'X XXXXX provided such purchase coins at the price of \$ 0.07 and sell it a year later for \$ 115 profit percentage will just go off scale.

The main and most significant goal of the project, which we set for ourselves - is to give every client the opportunity to invest without fear of being deceived or completely losing money.

The purpose Coin HTFx - to become one of the leading coin market cryptocurrency well-capitalized, with minimal costs, maximum profitability, along with a wide range of financial services to all segments of the population including the maximum protection and security of every customer's investment.

A coin, an instrument that can become an ideal global payment system, is usually used as a speculative asset. This project is designed as a solution to the main problem in question, and takes into account both the global problems and local problems faced by the entire financial system and the whole of the crypto currency.

Solving the set tasks for achieving all the goals is not a matter of one month or even a year is a difficult but achievable task for a team that has specific goals and ideas for their solution. That is why we are gradually, but with maximum efficiency and quality to fulfill all obligations and justify entrusted to our responsibility, study everything thoroughly and painstakingly slowly, because there will be a rush of excess.

We are convinced that the recognition of any coin is achieved through trust, our Coin HTFx is no exception. And this trust we receive not only for past merits, but also directly on the whole path of development of our company. Therefore, we gathered all the best in our opinion that there is a crypto currency in the market, took into account all your requests and wishes, implemented useful functions in Coin HTFx which each of you can appreciate and get financial stability and prosperity, and most importantly confidence in tomorrow day.

The ideological aspect

In the world over the past couple of years, a whole bunch of different financial start-ups have started, which are trying to offer an alternative to traditional banking. And Bitkoyn, who is trying to "please governments," will have to compete with them on an equal footing. And if you consider that almost all governments would have been easier for Bitcoin to just disappear - this competition could be deadly for him.

Coin HTFx does not try to adjust, under state regulation, and is positioned in a niche of real anonymity, in which "official financial projects" will not be climbed for political reasons. As a result, the HTFx coin will not be difficult to tamper with the entire niche of "alternative money", and Bitcoin alas has all chances in the long term and "hang" in the state of "neither fish nor meat."

Of course, the ambitions and plans of Coin HTFx "to become alternative anonymous money" will not appeal to a number of governments, which means they have not only great prospects, but also the corresponding risks. But, at least, Coin HTFx clearly positions itself, and clearly, for what it risks. Alas, this can not now be said about Bitcoin, whose success is unreasonable even if he successfully realizes his plans. This is a known problem: "Not enough ambitious plans save you from risks, but do not allow you to achieve good results." Therefore, the ideological aspect is very important.

Technological aspect

Based on the open source Bitcoin and Dash (and as we know, Dash based on Bitcoin's code), Coin HTFx is able to quickly and easily integrate key innovations and features of both Dash itself and other open source crypto-currencies. In the opposite

16/57

HTFx is a utility coin used in the HTFx platform. Purchase does not constitute investment

direction, this will not work (or there will be a number of significant limitations). The long-term perspective is as follows: Coin HTFx will work in a vacuum cleaner mode: "Let everybody in, do not let anyone out". Those. not only the first to accumulate the best foreign technologies (even those that are still only in projects) - but also create their own unique, successfully "rebuilt" from potential competitors. Network MasterNodes allows you to implement such functions that can not be realized on the basis of other currencies.

At the moment, these are 2 key, unique, operating technologies that maximize the possibilities of the MasterNodes network:

DarkSend is a technology (taken from Dash) denomination and anonymous decentralized pre-mixing of user facilities, which allows everyone to make anonymous payments without delay. The security of users' means is protected at the Dash protocol level - it is impossible to steal coins during the anonymization process.

Anonymization of Darksend occurs due to the fact that transactions are formed jointly by several users and are listed at once to several recipients during a group of collective transactions. As a result, it becomes impossible to establish a one-to-one correspondence between specific senders and recipients. Since during the preliminary anonymization all user facilities are sent to their own hidden addresses - the system at the protocol level is protected from the danger of theft during the anonymization of Coin HTFx. In the current implementation, if you use DarkSend, the funds of at least three users are mixed.

To increase the privacy of the system, during the anonymization all means are denominated in indistinguishable standard denominations - 0.1 HTF, 1 HTF, 10 HTF and 100 HTF. In each round of mixing, all participants operate with the same denominations sent and received funds. In addition to the denominational mechanism, the exclusion of commission fees is applied, which are subsequently levied through group irregular and non-tracked transactions.

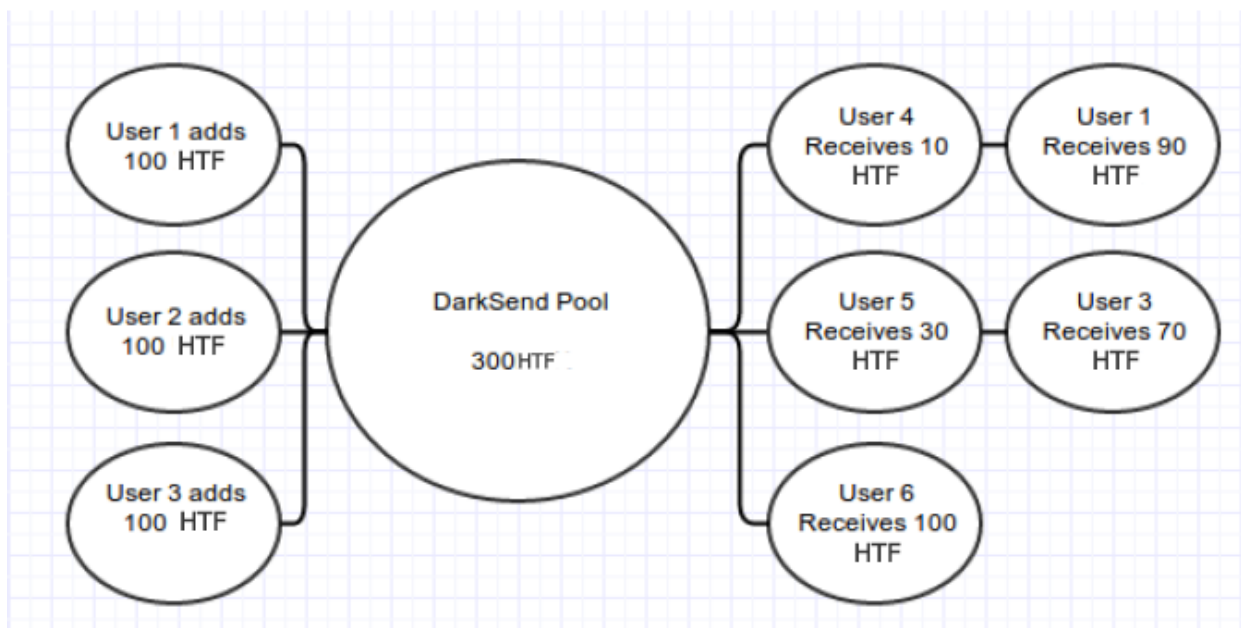

Using the Darksend function is limited in size - "no more than 1000 Coin HTFx per session". It takes several anonymization sessions to process larger amounts. To make using the Wallet more convenient and to make it difficult to analyze the transactions at the time of their execution - the Darksend function works in the background. At specified intervals, the user's wallet sends MasterNodes requests for mixing of funds. After receiving requests, the network broadcasts information about the parameters of the desired anonymization, which, however, does not allow you to receive private information about the initiating user request.

Each Darksend session is an independent event that increases the level of anonymity of the user's tools. However, since in one session there is only a mix of the nominal values of three users - the third-party observer can with probability of 1/3 guess the belonging of a specific face value of Coin HTFx. To increase the level of

17/57

uncertainty and the level of anonymity that results from it, a chain of mixing transactions can be performed, which occurs sequentially through a chain of random MasterNodes.

InstantX - instant technology (about 5 seconds) and guaranteed confirmation of transactions in the network Dash, followed by their inclusion in the blockade. This technology allows Coin HTFx to carry out almost instantaneous transactions - similar to payment by bank cards at points of sale, but without the participation of a centralized payment operator.

These 2 technologies, which are the main and advanced for Coin HTFx, are crucial for ordinary users of the task, can not work within the framework of other crypto currencies, since they are based on the features of the functioning of the MasterNodes network.

Thus, the MasterNodes network is a unique technological platform on the basis of which the most unusual and, most importantly, popular functional can be realized. This allows us to predict that Coin HTFx not only will not yield its current technological superiority, but it will also surprise you with new and yet unobvious technological breakthroughs.

Investment aspect

Awareness of the "hidden technological potential" of Coin HTFx is encouraging investors. Significantly, the forthcoming innovations are not visible to anyone in advance and, accordingly, are not included in the current value. This lays an excellent potential for further capitalization of the Coin HTFx Project in the future.

And this is not the only thing Coin HTFx is capable of inspiring long-term investors. Let's take a look at crypto-currency projects in terms of joint-stock companies. In fact,

it turns out that each coin represents 1 "share" and determines the corresponding share of your property from the total capitalization of the entire project. It should be understood that there is a regular additional issue of new coins, which actually dilutes the share of all current owners of "shares".

An important nuance is that all new coins, for example Bitcoin, which uses only PoW protection, are taken to the miners who support Bitcoin-network work well, but do not contribute to its development. Those who are really trying to develop the Bitcoin project (programmers, PR specialists, etc.) get inflation only in the course of time and hope that the growth of the course will block it. This is unfair in its essence and at least does not stimulate the further development of both the community and the crypto currency itself. And in fact - it winds up virtually any project and the company in a dead end.

In Coin HTFx, the release of new coins is different. There is also a regular emission, but the miners get only a part of additional coins, and the rest is sent to long-term investors - MasterNodes operators who perform PoS protection (and their share of coins increases monthly). As a result, we have a current situation in which the "shareholder" share of MasterNodes operators over time does not only erode, but even increases slightly, and this only positively affects the welfare of all investors holding Coin HTFx.

In other words, the ROI of MasterNode content exceeds the inflation caused by the regular emission of new Coins HTFx. Is not this a fairy tale? Holders of other crypto and conventional investments can only dream about it! In addition, unlike the miners, MasterNodes owners are vitally interested in further intensive development of Coin HTFx and the corresponding increase in its value. This compels most of them to participate in the development of the project not only with their personal abilities, time, etc. - but financially (yes, it becomes profitable for them to finance the development of the Project - this is reflected in the overall activity and effectiveness of the Coin HTFx community).

In addition, the increase in the number of MasterNodes (each of which, at the time of work, "fettens" the owner's 1000 HTF) triggers an inevitable deflationary mechanism, leading to an increase in the cost of Coin HTFx. And the increase makes the investment in additional Coin HTFx attractive, which in turn triggers a new round of an ideal chain reaction to increase the cost of the entire system. From a technological point of view, this ongoing increase in the cost of launching its own MasterNode in turn makes it increasingly costly to attempt attacks on the network and puts a reliable barrier before any effort to uncover anonymous transactions by Coin HTFx. This, in turn, leads to a new round of growth in the attractiveness of Coin HTFx and the increasing use and investment.

As a result, we get the ideal System, which in simple words - is spinning itself, capable of firing itself at new levels and seriously pleasing all, first of all investors, holders of Coin HTFx.

So, the attractiveness of launching own MasterNodes stimulates large investors to personally participate in this process. Technically it is not difficult, automated and accessible to anyone with general computer literacy. All server part of MasterNode content can be safely entrusted to third-party technical specialists. In this case, the owner of 1000 HTF should not and is not obligated to trust their funds for a second, and retains full control over them in his local wallet (accordingly, his investment is not exposed to risks at the same time).

Of course, if you take into account the total number of coins issued, you can calculate that there may be a maximum of 64 000 MasterNodes, but this is provided that everyone has at least 1000 Coins HTFx on the account, given the initial sales volume of 8 700 000 HTF, you can talk about 8700 MasterNodes, but feeling and understanding the possibility of obtaining the most passive profit with a minimum cost to buy Coins HTFx for \$ 500 on average ICO can buy 10000 HTF, at a certain stage of its holding for only \$ 5000 you can have Super MasterNode Gold and receive in a year from 45% and more profit in Coins HTFx and this is excellent chnoe business proposal.
<https://ico.htfx.online/>

This is why we present average values and calculations based on the development of already existing crypto-currencies in the world and are confident that our business model will be appreciated and accepted by society.

More details can be obtained in the next section, which will show the advantages and capabilities of Coins HTFx in general, but in many respects everything will depend on the end user, from the client who will make the right, right decision at the ICO stage and continue working with Coins HTFx.

Coin HTFx Description and Financial Model

On April 18, 2018, starting at 18:00 CST, HTFx.OnLine will issue 64 000 000 Coin HTFx to the general public.

| Coin HTFx Specification | |
|---|--|
| Name of the coin | Coin HTFx |
| Abbreviation | THF |
| Hash algorithm | X11 |
| Generation system (protocol) | PoW/PoS |
| Formula of reward for the block | $2222222/(((\text{Difficulty}+2600)/9)^2)$ |
| Mining | CPU/GPU |
| Algorithm of complexity | Dark Gravity Wave 3.0 |
| Decrease in the issue of coins per year (%) | 7 |
| Block size (megabytes) | 2 |
| Block generation (seconds) | 180 |
| Remuneration for the PoW unit | 15 |
| Confirmation of deposit (blocks) | 200 |
| Decentralized network | MasterNode |
| MasterNode commission (%) | 20/30/35/40/45 |
| Percent PoS v3.0 per year (%) | 6/12/24/48 |
| PoS reduction v3.0 percent per year% | 0/1/2/4 |
| Minimum age of the bet (days) | 30 |
| Maximum age (days) | No |
| Structure / creation of MasterNode (HTF) | 1000/10000/100000/1000000 |
| MasterNode IP | IPv4 only (IPv6 must be disabled) |
| Confirmation of deposit (blocks) | 20 |
| Pre-activation (minutes) | 10 - 20 |
| Minimum transaction on the network (HTF) | 0.001 |
| Maximum transaction (HTF) | 1000 per session |
| Transaction Fee (HTF) | 0.0001 |
| Transaction Confirmation (seconds) | InstantX \approx 5 |
| Transaction Security | DarkSend |
| Total number of coins (HTF) | 65 000 000 |
| Original coin issue (HTF) | 8 700 000 |
| Preliminary sales of ICO (HTF) | 3 000 000 |
| Sales of ICO (HTF) | 5 700 000 |
| P2P port | 28330 |
| RPC port | 33280 |
| MasterNode port | 28330 |
| P2P port for tests | 28331 |
| RPC port for tests | 33281 |

HTFx is a utility coin used in the HTFx platform. Purchase does not constitute investment

As you can see from the specification we use two protocols, we will not specifically paint and repeat that there are already the essence of the protocols, it is identical and reduces to protecting all the networks as a whole, for which clients receive compensation, for the work done, for their efforts and mining, including .

Given that the new block appears every 180 seconds (3 minutes), you can calculate the number of blocks per hour, per year and accordingly knowing the reward for the block to get the total number of Coin HTFx for a year or a certain period, this is shown in the table below (Production Years) below where we tried to make a detailed calculation and determine the time of extraction of the last Coin HTFx including. Of course, it will be necessary to additionally take into account the complexity of the recalculation for each block, but we tried to show, including a decrease in the output by 7% from the previous year of the new Coin HTFx.

| Generation time | 3 minutes | 1 hour | 1 day | 1 year |
|-------------------------|------------------|---------------|--------------|---------------|
| Remuneration (HTF) | 15 | 300 | 7200 | 2628000 |
| Number of blocks | | 20 | 480 | 175200 |

Dark Gravity Wave (DGW) - an algorithm for adjusting the complexity of mining, created to circumvent the shortcomings in the algorithm Kimoto's Gravity Well. In this case, a multiple and simple moving average is used to smoothly adjust complexity, which is recalculated for each block. The fee for the block does not change strictly with the block number, but instead uses a formula based on Moore's law: $2222222/((\text{Difficulty} + 2600)/9)^2$

We made our additions and improvements to the implementation of MasterNode

| MasterNode | Minimum (HTF) | Year (%) | Less (%) |
|-------------------|----------------------|-----------------|-----------------|
| Bronze | 1000 | 6 | 0 |
| Silver | 10000 | 12 | 1 |
| Gold | 100000 | 24 | 2 |
| Diamond | 1000000 | 48 | 4 |

Thus, holders of MasterNode will not be able to generate an unlimited amount of Coin HTFx, which will only positively affect the growth of the cost of the coin itself, and the profitability after the fact will be full 12 years, when the maximum percentage of profit for all MasterNode will be received. A decrease in interest occurs every year and this is seen from the table below (Years of production) below, but the percentage that they receive from the POW proof of work is growing. The percentage grows in the same proportion, which allows you to achieve a balance and distribute profit for 45 years at the age of 45/45/10, and holders MasterNode Bronze steadily receive 6% all 12 years + profit for proof of storage.

Mining is the process of selecting a block signature. This procedure has a high complexity, namely, the complexity directly depends on the profit of the miner. Crypto currency, in particular Bitcoin is arranged so that the more it is extracted, the more difficult the mining process becomes.

Following the logic that complexity is constantly increasing and remuneration in the long term is decreasing, it becomes clear that a single extraction of crypto-currency (solo-mining) simply can not exist. So there were mining pools, which unite miners from all over the world.

At the dawn of mining development, the complexity of mining of crypto-currency and the aggregate network hash allowed to extract coins even without specialized equipment. The computing power of the processor, and later the video card was enough to sign the unit and receive awards for it. However, the development of equipment for mining and the rapid growth of complexity led to the emergence of concepts:

Solo mining is the extraction of crypto-currency alone on its own equipment only. At solo mining, the miner retains all the reward for the unit.

Mining in the pool. A pool is a combination of the equipment capacity of many miners at once to increase the probability of finding a block. The reward for the block, extracted by the pool, is distributed among all participants.

Mining pool is a server that divides a large task of calculating the signature of a block for small tasks and distributing it to connected devices. Contribution to the overall work of each of the miners participating in the pool is estimated using the "ball" (from the English "share").

Share "is a small part of the job of finding a solution to a hash function for signing a block that is issued by a pool of a miner. Collecting balls from the miners, the pool server checks their validity. As soon as some "ball" satisfies the current values of complexity, the pool server announces the signing of the block. After that, the pool receives a reward for the block and distributes it among the miners in proportion to the number of transferred "ball" regardless of whether there was a signer among them.

Creating a pool mining is a full-fledged business. The owner of the pool earns by charging a commission from the coins they have extracted. Typically, the pool commission varies between 0.3% and 1-2%. In addition to the "official" earnings in the form of commissions with income, mining pools are often seen in understating the amount of processing power miner. It's easy to guess that a centralized pool has many opportunities to manipulate a hash of miners. In fact, this is an additional hidden commission for participating in the pool. Its size ranges from 0% (for honest pools) to 10% or more (for pools that deceive their members).

Despite the relative simplicity of creating a pool, it's still a difficult business. From a technical point of view, the pool is only a dedicated server with not the most complex software. To create a pool, you can use ready-made templates and step-by-step instructions. But the difficulty lies in attracting participants. Large pools appeared either among the first and quickly became popular, or were built around large private farms, offering attractive conditions to participants.

All crypto-currencies, which are emitted by mining on the basis of the Proof-of-Work principle, have a complexity indicator. The complexity of mining depends on the number of devices involved in the extraction and reflects the probability of finding the receipt of the award by the miner. The complexity increases with the arrival of new miners, automatically adjusting so that the new unit joins every few minutes. This means that there is a growing competition for the ever-changing size of the award for the block attached to the blockbuster. Increasing competition leads to a decrease in the probability of getting a reward when mining itself.

For example, the average time to search for a signature when bit-mining Bitcoin or Ethereum, even on the most powerful equipment due to incredible complexity, is approaching several years! But this is the average estimated time, but in reality the process can drag on for many years.

Mining pool, combining the efforts of thousands of crypto currency receivers, significantly reduces the time to receive a reward. Miner even with simple equipment, for a long time solving "balls" and not finding a single block, still receives a reward.

The algorithm for creating a pool can be described as follows:

Creating software. Writing a good code for a pool script requires a lot of time and money. Novice pool creators often, making minor adjustments, use already ready-made templates with open source. But on such scripts it is impossible to build a serious project because of low security. As the popularity of the pool grows, there will be first difficulties. The problems are most likely to be related either to crackers, or embedded in the code and hidden algorithms that steal the hashed miners.

Create a server. To raise the server for the mining pool, you will need serious cash investments. To create a stable pool, leased dedicated servers or specifically buy server hardware. Important features of the server should be high performance and fault tolerance. A separate and expensive item will be a broad and stable communication channel, as well as staff salaries. Among the employees of the pool, at least a system administrator and a technical support specialist will be included.

Promoting the pool. Spending on marketing, advertising and promotion will "eat" most of the budget. This is due to the high competition among the pools for mining. It is very difficult for a beginner to compete on an equal footing with monsters that appeared at the dawn of crypto-fever and combine 5-10-15% of the network hash.

Moreover, the centralization of mining in several large pools is typical for all currencies. The only way out is to provide the miners with unique services and focus on working with little-known and untapped crypto-currencies.

Pool commission.

A very important criterion for evaluating the pool. The pool commission is that part of the revenue from the extracted coins, which the server owner keeps to himself. High commissions make the extraction of crypto-currencies unprofitable. The average pool reward is 0.3-2%.

Frequency and minimum amount of payments.

Many pools limit the minimum payments and frequency of withdrawal of funds. This nuance is important if the miner has low-performance equipment. Accumulation of the minimum amount for payment can be delayed.

We knowingly and intentionally described to you thoroughly the whole way and the scheme of the Mining Poole work using the Proof-of-Work protocol (Pow) and each of you can create your Coin HTFx Coal Pool this is provided by the system. But already with the naked eye it can be seen that this is a very costly and laborious process by which not everyone can be engaged in creation, and not even every specialist will be able to resolve this issue quickly and qualitatively.

Another important and distinctive feature of Proof-of-Stake technology is that the version of PoS v3.0 is not in vain, it is possible to create pools on this protocol, which can be combined into a shared pool and maximize the benefits of this technology without having to understand programming at all, learn technical documentation, configure servers, perform routine work and most importantly, there is no need to spend extra money on the launch and operation of your Poole.

Of course, there are features that need to be known and correctly understood that we can not assume that someone will take advantage of this improvement and will exploit the vulnerability of each crypto currency which is called "Attack 51%". That is why the maximum number of participants PoS v3.0 Pula no more than 10 people including the founder and call it Super MasterNode which can and has the full right to establish its terms of entry and payments in its Pool, establish fees, terms and amount of payments, decide to refuse or accept participant in his Poole.

You can create your own Pool if your MasterNode Silver status is holders of 10 000 HTF or more can create a Pool, and all interested persons can participate in MasterNode Bronze, but not more than 9 in one Pool. The same happens with other MasterNodes - senior in rank can collect and invite younger ones. The number of active MasterNodes is not reduced.

Let's consider an example:

The owner (A) bought 100000 Coin HTF_x and created MasterNode Gold to receive 24% a year from holding the coins in his wallet. The owner (B) has only 23050 coins and holds MasterNode Silver - receives 12% per year, the investor (C) has only 40186 HTF and MasterNode Silver also receives 12% per year. Everyone keeps coins in their wallets and benefits, in total 3 full MasterNodes work. One moment (A) makes a decision to create its own Pool and announces the creation of Super MasterNode Gold while setting a pool commission of 2% and a minimum payout of 100 HTF. This SMNG Pool can only accept multiples of 10000 HTFs, therefore (B) leaves on its MNS 13050 HTF which is given to it all as well as 12% per year and lists 10000 HTFs in the SMNG Pool, in turn (C) leaves 10186 and transfers 30,000 HTF in the SMNG Pool. Now (A) on the purse in the SMNG Pool is 140000 Coin HTF_x per cent per year 24% per month $2\% * 140000 \text{ HTF} = 2800 \text{ HTF}$ per month profit from this Pool. The profit (A) will be 2% or 2000 HTF, with the share (B) being 200 HTF, the share (C) = 600 HTF => $2800 \text{ HTF} - 2000 \text{ HTF} = 800 \text{ HTF}$

Many can say that this Pool and investments are not profitable given that the organizer picks up 2% of the payment, but this is not true. Let's calculate how much each month would be received using MasterNode's owl:

(B) 12% per year => 1% month = $10000 \text{ HTF} * 1\% = 100 \text{ HTF}$ (solo mining)

(C) 12% per year => 1% month = $30000 \text{ HTF} * 1\% = 300 \text{ HTF}$ (solo mining)

It's obvious right away that 24% is more than 12% per year, 2 times!

Even taking into account the commission of 2% to the holder of SMNG, the benefit is immediately visible, but we will calculate fully taking into account the commission in Pool mining (B) gets 196 HTF (200 HTF - 2%) and accordingly (C) gets 588 HTF (600 HTF - 2%).

The net profit from the unique opportunity to work in the Proof-of-Stake Pool (PoS v3.0) with Coin HTF_x coin for a month in a visual example is:

(B) +96 HTF (196 HTF-100 HTF)

(C) +288 HTF (588 HTF-300 HTF)

Two times more, of course every year the profit will be reduced, but will remain relevant for:

Super MasterNode Silver (SMNS) => 6 years (until 2023)

Super MasterNode Gold (SMNG) => 9 years (until 2026)

Super MasterNode Diamond (SMND) => 11 years (until 2028)

In our example, the owner (A) the founder of SMNG approached the issue productively and with big plans for the future in the development perspective for at

26/57

least 10 years in front. From this operation from the example, he earned as we see only on the commission 28 HTF (4 HTF + 22 HTF), but do not forget SMNG is not completely formed since it is designed for 9 participants + the creator himself, and we did not show the profit that he will receive Proof-of-Stake technology as the more the owner of any MasterNode keeps coins on his wallet, the higher the chance of processing and recording the block, which means more rewards and payments for the main process of mining under this protocol.

The obvious advantage of Proof-of-Stake over Proof-of-Work is that its implementation does not require huge energy consumption from miners, which makes it much more efficient. PoS v3.0 mining allows you to extract crypto currency without purchasing expensive equipment and without technical training. Simply put, money makes money - it's not just empty words, it's a real example that we gave you on our coin, and they proved how the proverb turned into reality - into life.

Be vigilant and attentive when you take part in the PoS v3.0 Pole from the practice can be seen, then PoW Pools that collect dozens and hundreds of miners GPU can not pay rewards, delay payments or be hacked by intruders, some immediately create such pools to deceive investors. To begin participating in Pool PoS v3.0, carefully study the conditions and possible guarantees for the safety of your investments in someone else's wallet, carefully and thoroughly study all the risks associated with this type of mining (production of new Coin HTFx). Evaluate, ponder and make the right decision for choosing any Pool.

We reserve and reserve to ourselves only 0.47% of the total number of Coin HTFx's issued only 300000 HTF and create for you immediately three official Super MasterNode Gold which are able to accept only 27 MasterNode Silver while from the very beginning your coins will begin to bring you revenue in twice the amount claimed, the funds are on the company's accounts.

Moreover, you do not need to pay any commission at this, since we do not take commission for internal transfers inside the company. Transfers and payments of profit for you will be completely free, and the monthly profit can be profitable to sell to any new participant, you can exchange in the exchange office, start trading on the crypto-exchange, to benefit fully, with guarantees of the safety of your funds.

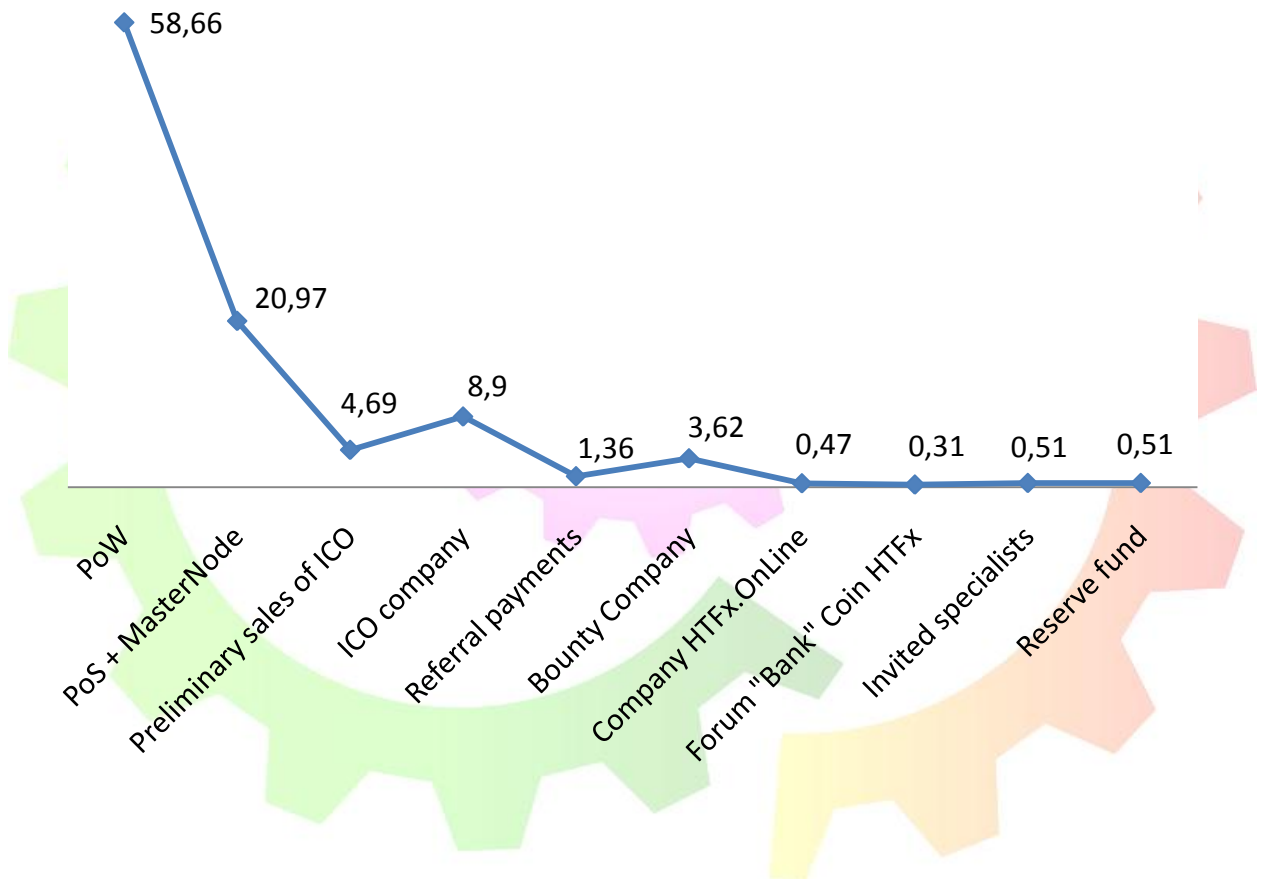

The withdrawal of all savings is possible at any time in full without penalties. You can withdraw some or all of the funds, but you do not receive any rewards. It is best to plan the withdrawal of the whole deposit at the beginning of the month, since the settlement period is 30 days.

You only have to buy 10000 Coin HTFx <https://ico.htfx.online/> and send them to SMNG for this simply contact the Finance Department via **Skype: finance.htfx**

The overall distribution of Coin HTF_x is as follows:

| Assignment of distribution Total number of coins | Quantity (HTF) 64 000 000 | In percentages (%) 100 |
|---|--------------------------------------|-----------------------------------|
| PoW | 37 542 838 | 58,66 |
| PoS + MasterNode | 13 419 750 | 20,97 |
| Preliminary sales of ICO | 3 000 000 | 4,69 |
| ICO company | 5 700 000 | 8,90 |
| Referral payments | 870 000 | 1,36 |
| Bounty Company | 2 317 412 | 3,62 |

| Total coins (HTF) | 2 628 000 | 2 444 040 | 2 272 957 | 2 113 850 | 1 965 881 | 1 828 269 | 1 700 290 | 1 581 270 | 1 470 581 | 1 367 640 | 1 271 906 | 1 182 872 | 1 100 071 | *** | 1 |
| For the first 13 years (HTF) | | | | | | | | | | | | | | 22 927 627 | |
| All time (HTF) | 2018 year | | | | | | | | | | | | | 37 542 838 | |

In the preliminary calculations, we laid down a decrease in payments for PoS Mining, where it is clearly visible that in 12 years each of MasterNode will be released at 6% per year, and for 13 years they will receive 45% of the rewards for the PoW unit they work will be confirmed. It is such a scheme in our opinion is a fair distribution, for all participants and holders of Coin HTFx.

Groups and social networking

It is on social networks that many now spend their time and it is there that you can quickly discuss any issue or get an update on the actualization of information, solve problems that arise in the work. We distinguish several main social networks, in our view, which are common are Facebook, Twitter and Vkontakte.

In addition to the fact that we created our account there, we created groups for all those who do business, where company news, Coin HTF x news and important messages will appear. Also in groups, you can freely communicate, discuss Coin HTF x, share with other clients on the network, share emotions, enjoy and replicate posts that you like. All this will play a positive role in the social aspect, in the development and promotion of Coin HTF x as well as influence its pricing in some way, all customers should be the most interested in this.

Here are links to groups and profiles that already exist:

Technically, we think that every holder of Coin HTF_x should be in a group and have our contacts in their contacts. But we can not force you to do this by force. We can not impose you to lead an active life in Social networks, if this contradicts your moral and moral qualities.

That's why for the most active, we have developed a powerful Bounty company and the most active clients will be able to earn and receive Coin HTF_x for free at their disposal. Recall that in general for the advertising, Bounty company allocated 2 317 412 Coins HTF_x.

Beginning of coin sales by HTF and ICO company

We have already stated clearly, in detail and in detail everything in White Paper and follow the goals and objectives set. We decided to conduct Preliminary Sales of ICO in one stage and the main ICO which will take place in five stages with the increase in the cost of the HTF coin with each new stage.

As it was planned to collect enough budget from the sale of a coin no more than 50 Bitcoins by volume at the current market rate and we can say that already within two / three weeks after the completion of the ICO, all coin holders will be able to use their own wallets, a Blockchain explorer will be available, and already literally in a month the coin will appear on the exchange auctions.

Consequently, the very stage of the roadmap can be partially reduced or increased depending on sales on the ICO and, to a large extent, on the activity of the clients themselves, since first of all we focus on the client.

We allocate 8 700 000 HTF coins for sales, this amount will be distributed among the participants, and they will receive the first MasterNode status, launch the mining process and start earning profits from the first minutes. Given the minimum price for one coin of just \$ 0.01 for 1 HTF Coin, virtually anyone can have MasterNode "Bronze" and allow MasterNode "Diamond" to be available to everyone.

The minimum purchase is expedient in 10 \$ (it is recommended to purchase not less than 1000 HTF as this quantity allows to create MasterNode)

Maximum: 1 000 000 HTF

Preliminary sales phase 18.04.18 / 04.22 - 3 000 000 HTF is allocated
The first stage of the ICO 18.04.23 / 05.07 - 2 300 000 HTF
The second stage of the ICO 18.05.08 / 05.21 - 1 300 000 HTF
The third stage of the ICO 18.05.22 / 06.05 - 1 000 000 HTF
The fourth stage of the ICO 18.06.06 / 06.20 - 800 000 HTF
Fifth stage of the ICO 18.06.21 / 07.04 - 300 000 HTF

If Coin HTFx are sold ahead of schedule, then the next stage begins immediately after the completion of the previous one. All coins that are not sold within the allotted time, at the ICO stage, go to a new stage at a new price.

Everyone can purchase coins at any stage and pay in any convenient way that is provided by the company. At the fifth final stage of ICO, the price of one HTF coin is \$ 0.11 per HTF

You can buy and pay for Coin HTFx in more than 30 ways, convenient for you, we specifically provided you with the opportunity to purchase not only PerfectMoney, but also for Payeer, and also you can make payments in the currency of BitCoin, BitCoin Cash, Ethereum, Ethereum Classic, LiteCoin, ZCash, Dash, Doge and payment systems such as: PerfectMoney, AdvCash and Payeer.

You need to contact Skype: finance.htfx finance department, create a purchase request and receive the transfer amount, invoice for payment. You can also discuss all the issues in our Forum <https://forum.htfx.online/>

We know that it is most convenient to purchase with the AdvCash payment system, this system, which we use in our work, allows us to make instant transfers without a transfer commission, an understandable and convenient payment system for business and work for all customers. But if you have money in crypto currency, just make a transfer to our account, pay the bill and get Coin HTFx at your disposal.

Attention! We remind you that to create MasterNode you must have at least 1000 HTFx Coins. The more coins you have, the higher your profit percentage from participating in Proof of Stake (PoS v3.0).

Buy Coin HTFx on ICO for any currency

You can buy in automatic mode for **PerfectMoney** <https://ico.htfx.online/> in your personal account. We think this is a very convenient way, but there are other options. To receive an invoice for payment, you need to contact the Skype Department with the financial department and discuss the terms of the coin purchase.

Skype only: finance.htfx

HTFx Coin Referral Program

Do not confuse with the Bounty Company. A referral program is a great way to earn free coins by inviting new members.

The referral program only works for the ICO and the partner receives 10% of all coins bought by the customers of its structure, respectively, the more active clients of the partner, the higher its profit.

Referral fees are calculated manually. To start getting 10% with every real partner you need to have a deposit on your balance. Need to personally buy a minimum. Currently, the minimum is 1000 Coins HTFx, which is in the dollar equivalent at a price of 0.01 \$ per coin HTF => total investment budget of \$ 10

The price of the coin is growing. Make a purchase and develop your structure. Get a passive profit. <https://ico.htfx.online/>

Investment use of income from ICO

High Technology Solutions Limited uses its budget and funding from its formed funds to start and start the development of a new cycle and channel a previously unused one, a coin of its own, coin HTFx, which you learned in this white paper. We intentionally tried to cover all the possibilities of creating a crypto currency, tried to give an opportunity to all our clients to participate and get the maximum profit from their investments and engage in development and promotion like everyone else.

The funds raised from the sale of Coin HTF_x are distributed in this way:

45% Business development: Development of numerous functions based on blockchain technology and their integration with an already existing platform that will ensure the development and growth of the powerfull system. To achieve our goals, we will involve experienced professionals who have experience in this field and will enable us to realize our potential.

35% Software and infrastructure: We need to expand our development team to make sure that the platform runs on advanced technologies, ensuring seamless user interaction, security and reliability.

10% Marketing: Increasing brand recognition in the community Crypto-currency To achieve this goal, we will use ready-made marketing strategies, traditional advertising methods, and enter into partnerships since the main marketing reserve is used in the company's Bounty, but is widely used in the initial stage of the first 2 - 3 the month of the ICO, further development comes at the expense of its own financing, connection of reserve funds, use of the profits for the first 13 years.

5% Legal department and administration: we need a strong legal and accounting team that will ensure compliance with regional and state laws, while maintaining the safety of our customer base.

5% Potential liabilities: There is a possibility of some unforeseen expenses associated with the introduction of new functions and technologies, so a certain amount of our budget will be allocated to address this type of circumstances.

The most competent use of the proceeds from the sale of Coin HTF_x to ICO is the key to the success of not only the coin and the company as a whole, but most importantly the clients that HTF_x.OnLine is targeting customers and your well-being is the fundamental qualitative growth in the price and demand for Coin HTF_x. According to our estimates, in the first quarter of 2019 we are going to have a price of 1 HTF = 17.38 \$ on crypto-exchange exchanges and exchange offices. You can calculate the profit from the sale of your 10,000 coins or 100,000 coins in 8-9 months, considering that you are buying at the price of 1 HTF = 0.05 \$. What is the maximum profit percentage you get?

Participate in the ICO. Buy coins at the lowest possible price. Get the maximum passive profit and earn your first million dollars enough to have just 100 000 Coin HTF_x, but even if you have 1000 HTF or 10 000 HTF in stock, you will definitely be in the black. <https://ico.htfx.online/>

Bounty Company, (SMM) Coin HTFx

All must register on the ICO portal here <https://ico.htfx.online/> first.

All Bounty company members must have a registration on our forum:
<https://forum.htfx.online/>

All participants must fill out the forms for each Bounty of SMM Coin HTFx company separately, if they wish to participate in it.

If you do not register, you will lose the bonus and will not be able to claim payments of rewards through the company's Bounty.

Be sure to register with each company separately if you want to promote in different social networks and participate in the whole Bounty company without exception and this can be done to one (everyone) if you meet the criteria.

If you have any questions about rewards or you want to change the address, you have other questions you can always ask them in the affiliate's partner department: partner.htfx and decide individually. You can ask on the forum in the appropriate topic. We decided to make a separate branch on the forum with reports and separately with possible questions for better reading.

Everyone should read and study White Paper to study the information on the ICO website, the client's office and follow the instructions of the company's Bounty to receive the award in time to follow the rules and regulations. Participants are accepted by clients from different countries, but mostly English and Russian are used, if you communicate only in your own language eg German, Spanish or your native Chinese language or any other language you can lead and conduct Bounty SMM Coin HTFx in your own language, the most important thing is to convey the information to your audience and that is understandable to your readers. We will not object to this.

The total amount of 2 317 412 Coins HTFx allocated to this Bounty company will be 3.57% of the total number of Coins HTFx (Total 64 000 000 HTF)

Twitter => 20% = 463 482 HTF

Facebook => 30% = 695 224 HTF

Vkontakte => 10% = 231 741 HTF

Youtube => 15% = 347 612 HTF

Instagram => 4% = 92 696 HTF

Telegram => 3% = 69 522 HTF

Blog Article => 10% = 231 741 HTF

Bitcointalk => 3% = 69 522 HTF

All Bounty SMM Coin HTFx => 5% = 115 871 HTF

Bounty Company, Media Coin HTFx. ::. Bounty SMM Coin HTFx Instructions

We provided the main directions in our Bounty company, but this does not mean that we are not ready for cooperation or that we are limited only to these areas. No, we are ready to consider any of your suggestions. Moreover, you do not just take part yourself, but you can receive an additional 10% of the referral interest that you put to everyone at the ICO Coin HTFx, which is another additional and passive income for Coin HTFx and most importantly simple for everyone.

You have your own forum, your site, you develop banners, write articles, make educational video presentations, create advertising campaigns, promote websites on the Internet, you want to earn and receive Coins HTFx for your actions and the work you do with love, please contact us and we will be able to cooperate with you.

You are the owner of a currency exchange, you have your own broker company, you are the director of an investment company, you are the owner of an exchange office and want to cooperate with us, you want to build a business and have Coins HTFx - contact us and we will cooperate with you. Terms of cooperation on favorable terms for all parties, for the development and promotion of Coin HTFx.

We are also ready to pay Coins HTFx for other social networks such as: **LinkedIn, LiveJournal, Google Plus, Tumblr**

You are engaged in automatic posting on bulletin boards, forums, blogs, comments sending articles, you use automated systems in your work that give you 150 000 registrations, we are ready to discuss the decision and promotion in this direction with payment in Coin HTFx according to our regulations and based on at the prices indicated. Of course, such mailings do not carry quality, and sometimes they are just needed for reference mass, but even if the price of one signature is only 0.001 Coin HTFx, then only one mailing in 150 000 forums with our Coin HTFx website signature can earn 150 Coin HTFx immediately, signature + message = 1650 HTF

In any case, we negotiate all the conditions individually and know the price. We know all the work. **Official start Bounty SMM Coin HTFx 23.04.18 the end date will depend on sales Coins HTFx**

The question may arise: "What will happen to the coins allocated to the Bounty Company if the ICO sales ends early?" Of course, if you look at the dates on July 4, 2018, but if the sales are "fast" and will be completed earlier - Bounty company must be stopped. All this is logical, but if so, the Coins HTFx will remain in the Bounty of the company, then they will go on sale and an additional ICO will be announced at the price of the last round. 1 HTF = 0.11 \$ All this can be very beneficial for our customers if at that moment Coins HTFx will start to be traded on stock exchanges, to be accepted by exchange offices at a much higher rate, then we can buy Coins HTFx officially for 1 HTF = 0.11 \$

The remaining Coins HTFx coins can be sold to broker companies for further monetization of the network turnover and trading on the stock exchange, offered exchange offices for conducting operations on conversion and exchange with customers.

Road (Roadmap) development map

Coin HTFx has an aggressive road map for 2018-19, as we think, but we are confident in our abilities. The Coin HTFx development team is dedicated to the rapid expansion of coin technologies and capabilities. Additions and proposals to the road map are welcome and welcome. Our road map consists of a number of steps that will be addressed as they are relevant to the solution and advancement to our long-term business plans.

The first step has already been made long before the writing of this White Paper and the compilation of this Roadmap in 2011, when it was decided to register High Technology Solutions Limited, the team without the concept of a road map with the company's charter and clear plan took less than a year to occupy a niche in Forex industry and not only serve customers, but also provide services for the sale of turnkey turnkey companies, custom software development and other services in the field of Internet trading.

It is the significant status, knowledge of your business, responsibility to each client, diligence, decency, it is possible to list all the qualities of the HTFx team, they invest all knowledge, put all their efforts and their soul into the development of any project, all this gives guarantees and imposes a milestone success on the promising development of Coin HTFx.

Implementing all our ideas and developing Coin HTFx should be cost-effective - this is the task that we set as a priority. To this end, our team has developed a plan for the development of Coin HTFx. The presented list of stages will become a roadmap for our project.

| | |
|---------------------|--|
| Second quarter 2018 | The launch of the Coin HTFx coin sale site (ICO site) begins before the sale. Publication of WhitePaper, launch of the forum, work with clients. Beginning of the development of Coin HTFx and the launch of the launch of the original coin offer, the sale of Coin HTFx. Run the Bounty program. |
| Third quarter 2018 | Work on the technical part of the project. Development of technical infrastructure, e-wallets for Coin HTFx, integration of payment systems (optional), testing and launching of internal purses, deployment of HTFx motives in a block chain, as well as other tasks preceding the release and sale of tokens on crypto exchanges. Large-scale holding of Bounty Company around the world. Maximum reach and work with clients. |

| | |
|--------------------------------|--|
| <p>Fourth Quarter 2018</p> | <p>Solution of marketing tasks. A serious stage of work, important and responsible at this stage. Coin HTFx will enter the leading crypto exchanges: Binance, Bitfinex, Kraken, Bitstamp, Bittrex, Hitbtc, Poloniex, Exmo, Yobit, Livecoin. Log on the stock exchange is necessary for promotion and development. This stage is implemented in a complex way with the implementation of Coin HTFx, not only for crypto-exchange, but also for the possibility of exchanging this currency at the Forex exchange in MT4 terminal. Technical realization of the set goals and tasks.</p> |
| <p>First quarter 2019</p> | <p>The main stage of HTFx motivation development, which includes analysis of the work performed and strategic planning for future development. Implementation of Coin HTFx in exchange offices, integration with leading investment companies to provide contracts to their customers. Distribution of the company's budget Bounty for 2019-20 years from the amount allocated in 2018. Use of a reserve fund to launch additional services to promote and promote Coins HTFx, world recognition and coin prices at least US \$ 17.38 on all exchanges and exchange points.</p> |

Open source provides the benefits of transparency. Transparency allows any interested person to fully familiarize themselves with the source, and to identify vulnerabilities as quickly as possible. Speaking about these contracts, it is worth noting that there is always room for efficiency, work flow and overall implementation, and our team will continue to improve all the envisaged processes, as well as take into account any contribution of the community.

Taking into account the possibility of a vote, the participants, holders of MasterNode Coin HTFx can vote and decide to send more valuable recommendations on the use and application of both Coin HTFx and the formation of absolutely new services and spheres of circulation of our coin.

We are ready to achieve the set tasks, but we always take into account the desires of customers in the way demand generates the market, and we are always ready for innovations, changes to keep pace with the times and ensure the functionality of the whole company High Technology Solutions Limited as a whole.

Conclusion

Although the use of crypto currency sharply increases, obviously, there is a critical problem with mass adoption. It is a victim of his success. Although the Crypto-currency is, in fact, designed to become a catalyst for the democratization of money, production, supply and use of it are severely fragmented. There is no central government or banking control. Thus, the currency can not be inflated or deflated. Typical monetary funds in cash can be largely manipulated without any consultation. There is, apparently, unlimited distribution of digital coins. In addition, the relatively weak rules and ambiguity of the nature of some digital coin issuers stimulate unpredictability of extreme prices.

The thirst for investors at an early stage also contributed to this volatility. For example, since the beginning of the exchange of crypto-currencies, the values of coins have been unstable. These sudden bursts of prices and falls can lead to the chaos of regular monetary services. All this makes it possible to effectively use the coin for money transfers, currency conversion and ATMs. When the owner of a crypto currency requires a fiat to finance a meaningful financial activity, they face exorbitant charges. In addition, the hostile process of the banking client and its compliance remain complex. Despite what the promoters say, there is no reliable way to use crypto-currency. For example, Bitcoin ATMs can charge up to 15% only for converting to fiat currency. This violates the original purpose of crypto-fibers, which was to become a cheaper and more flexible alternative to other payment methods. Without any advantages over printed government money, why does an ordinary person use it?

Reversing the paradigm, banks should act in a mode of compatibility and consumer protection, which is due to large-scale supervision and fiduciary control. The client can not just appear with a purse with crypto currency and convert holdings into a widely used country, issued by currency. The problem is that a transaction of any size with a crypto currency is immediately flagged as fraudulent. It is almost impossible to make major purchases, such as a car, a house or even schooling. Issues related to AML / KYC and compliance with general regulatory requirements are just a few, which should be taken into account when adopting and adopting such a scenario. There is a systemic and reputational risk that needs to be mitigated. It is known that banks close accounts without warning that they are making transactions in crypto-currencies.

Our unique innovation for the community of crypto-currency systems is our completely competitive and evolutionary management model that allows a wide range of stakeholders in conditions of optimal decentralization. Bitcoin created the initial breakthrough in a distributed consensus, but since then other projects have done this

with different voting mechanisms. These projects range from Dash with a simple application and a community-based voting model, each of which has made a positive contribution to the evolution of decentralized consensus, but Coin HTF_x does this to a new level, easing additional constraints, so that our system will change over time through a constant The competition between management service providers in the ecosystem. We are implementing an autonomous system that will change with feedback and trial and error innovations in how decentralized systems are organized to address specific problems. In this sense, we believe that Coin HTF_x is innovative in social technologies, an innovative system that has never been used on a targeted scale to meet the challenges and challenges.

From a broader perspective, Coin HTF_x competes with existing currencies and banking systems, as well as with new start-ups with a particular advantage in providing services without civil rights. We decided to contribute to this innovative, welfare-oriented space, providing increased privacy and security. There is also an infinite number of potential projects that can be built on the Coin HTF_x platform, increasing our competitiveness exponentially. We view competition as a means of healthy growth processes and, therefore, welcome maximum competition. We would prefer to live in peace with competitors that force us to accelerate our own innovations than a static world devoid of progress. We hope that Coin HTF_x will have a positive impact on people's welfare by combining excellent technologies and communities, turning management into a competitive service and enabling anyone to participate in our system of conflict-free, joint and decentralized innovations. We also consider operators and future start-ups in this space as potential partners and allies, not winners of all competitors.

Become the holder of Coins HTF_x, launch your MasterNode, become part of a powerful system for your development and improvement of well-being.
